Verificamos la imagen en el backend:

Verificamos la imagen del frontend:

Creamos una red compartida:

Levantamos Nexus:

```
5aa997a18678f53f468bbce7cb748ff315ef258c27cf6f5dd4bd8b247deb7ea9

docker@205m26:~/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base/frontend$ cd ..

docker@205m26:~/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base$ cd infra/nexus_config

docker@205m26:~/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base/infra/nexus_config$ cp .env.example .env

docker@205m26:~/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base/infra/nexus_config$ docker compose up -d
WARN[0000] /home/docker/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base/infra/nexus_config/docker-compose.yml: the attribute `version` i
s obsolete, it will be ignored, please remove it to avoid potential confusion
[+] up 10/10
 ✔ Image sonatype/nexus3:3.68.1   Pulled                                                                                                    66.3s
 ✔ Volume nexus_config_nexus_data Created                                                                                                    0.0s
 ✔ Container nexus                Started                                                                                                    1.2s

docker@205m26:~/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base/infra/nexus_config$
```

Obtenemos la contraseña inicial de nexus:

```
2026-09-30 12:53:20,771+0000 INFO  [jetty-main-1] *SYSTEM org.sonatype.nexus.bootstrap.jetty.JettyServer -

ation scheduler...
2026-09-30 12:53:22,559+0000 INFO  [qtp1393806436-114] *UNKNOWN org.sonatype.nexus.internal.security.anonymous.AnonymousManagerImpl - Using default co
nfiguration: OrientAnonymousConfiguration{enabled=true, userId='anonymous', realmName='NexusAuthorizingRealm'}
2026-09-30 12:53:23,418+0000 WARN  [Timer-0] *SYSTEM java.util.prefs - Could not lock User prefs.  Unix error code 2.
2026-09-30 12:53:23,420+0000 WARN  [Timer-0] *SYSTEM java.util.prefs - Couldn't flush user prefs: java.util.prefs.BackingStoreException: Couldn't get
file lock.
^Cdocker@205m26:~/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base/infra/nexus_config$ docker exec nexus cat /nexus-data/admin.password

1e25878a-82e8-47bb-8646-0ce6ec0d298fdocker@205m26:~/Desktop/taller/taller-g3-jenkins-cicd-barrionuevo/codigo_base/infra/nexus_config$
```

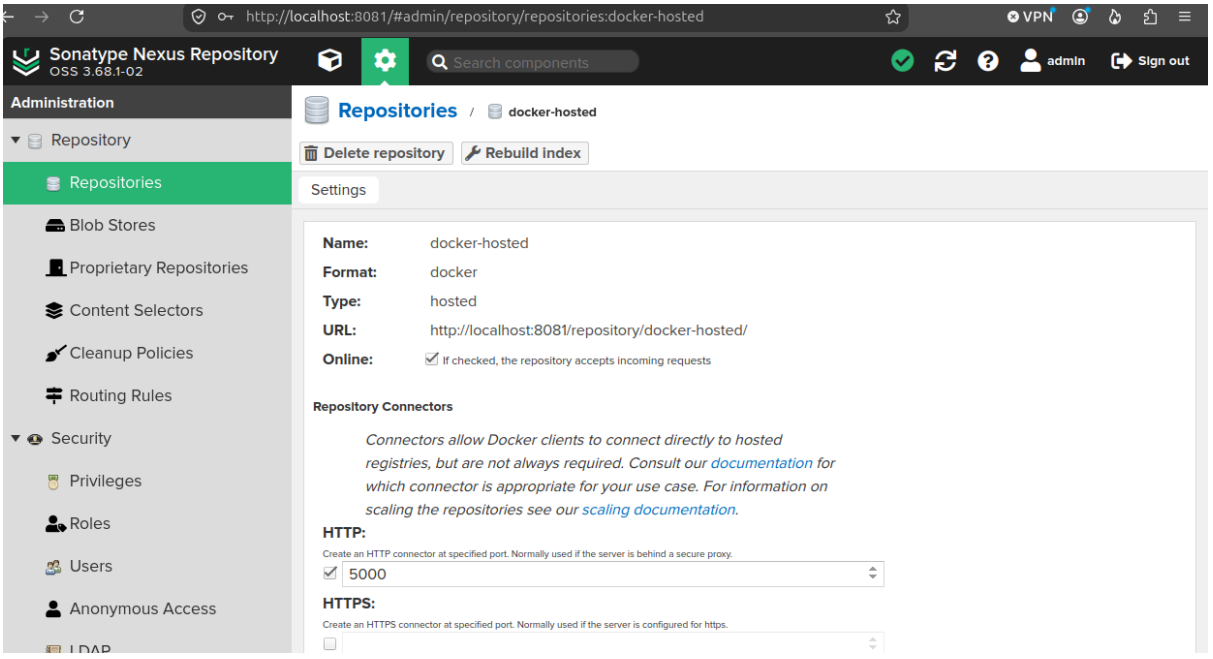

```
1e25878a-82e8-47bb-8646-0ce6ec0d298f
```

Y accedemos a http://localhost:8081 para configurar todo el ambiente

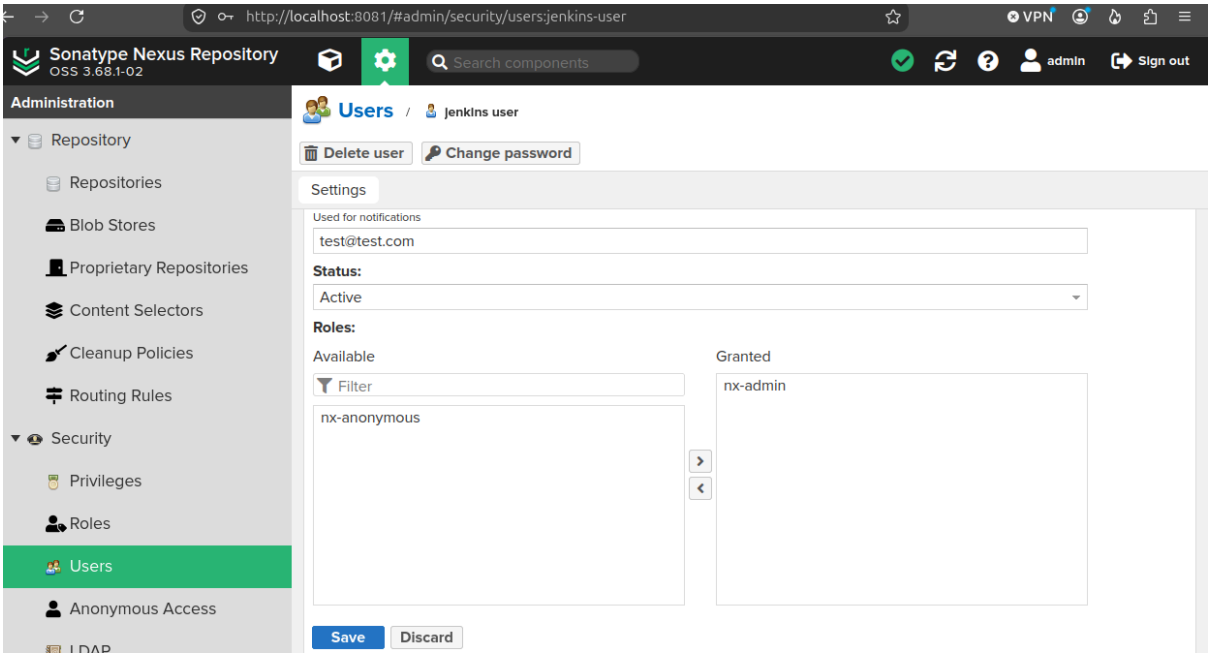

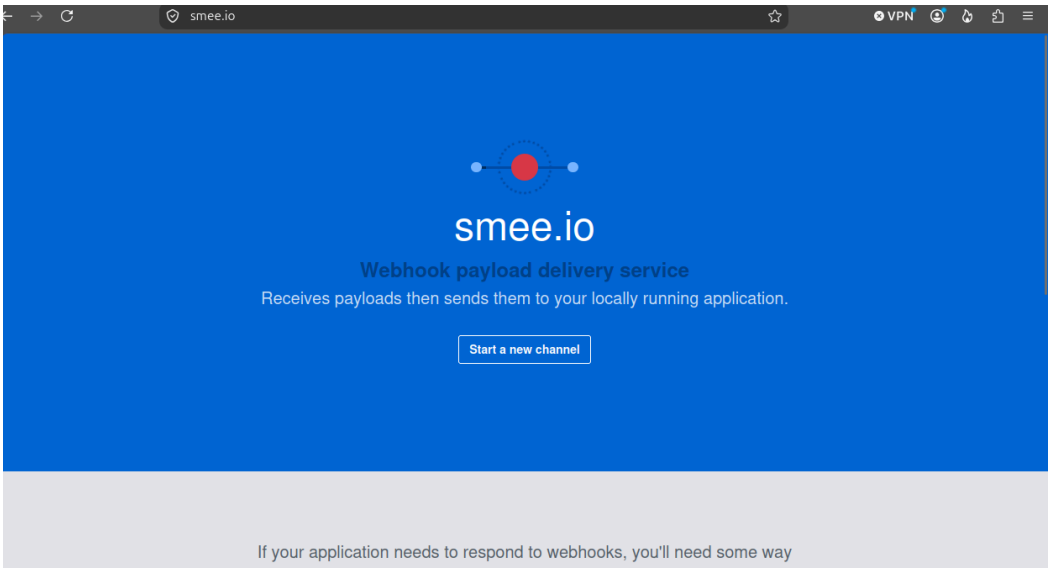

Creamos el repositorio Docker hosted y usaremos el repositorio Maven que ya viene por defecto:

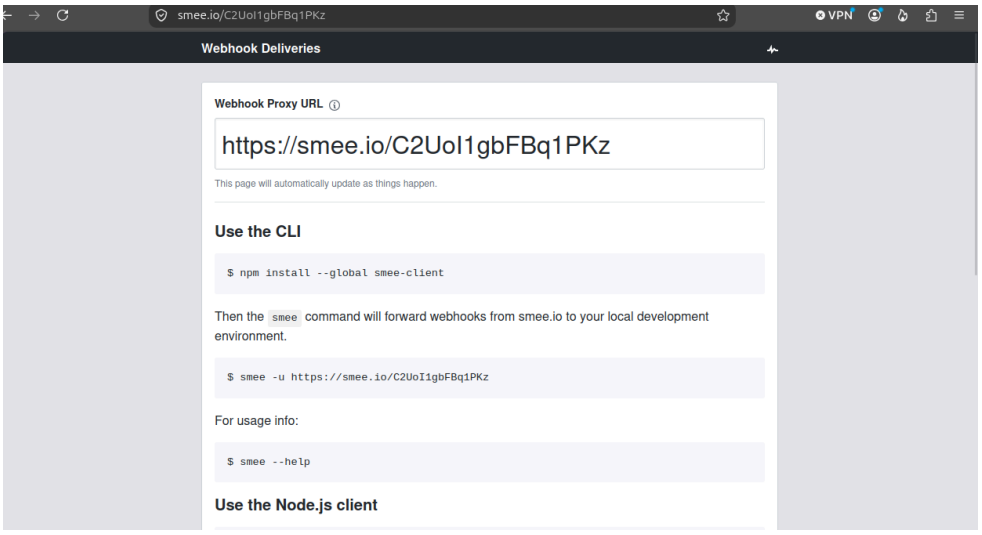

Creamos el usuario para Jenkins con el rol de nx-admin:

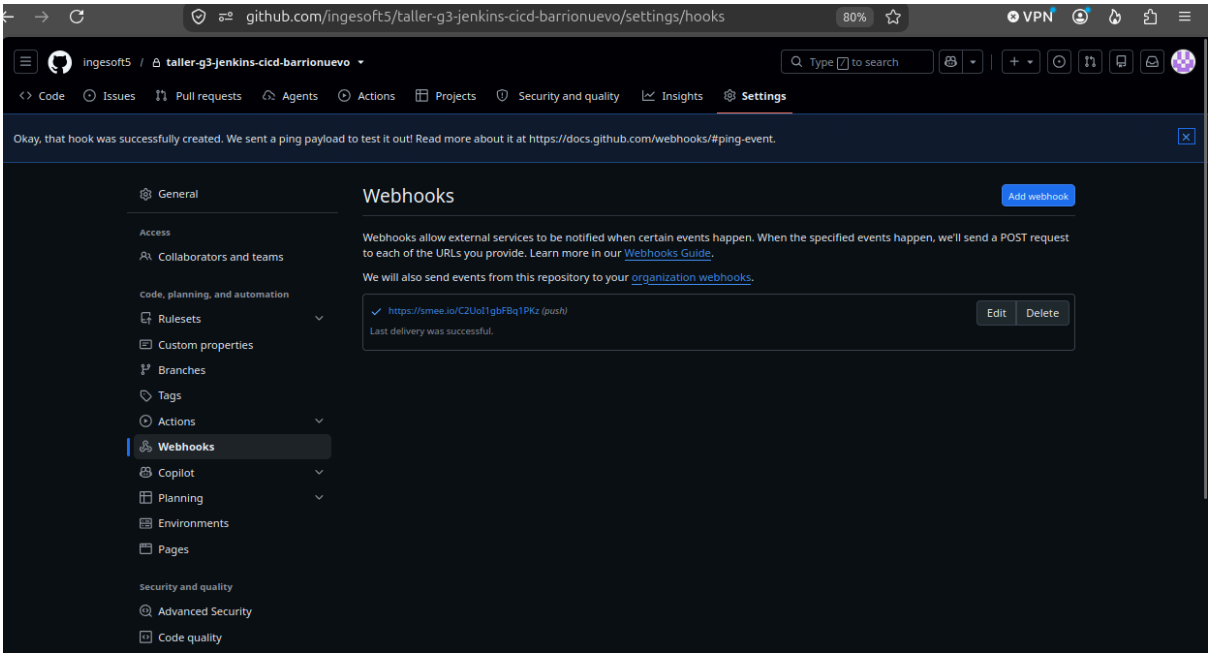

Abrimos un nuevo canal en smee:

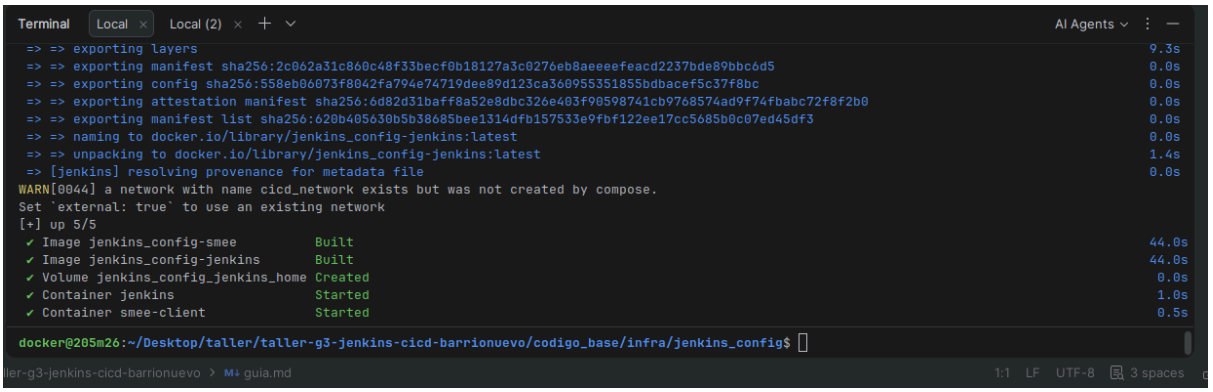

Crea el webhook en GitHub:

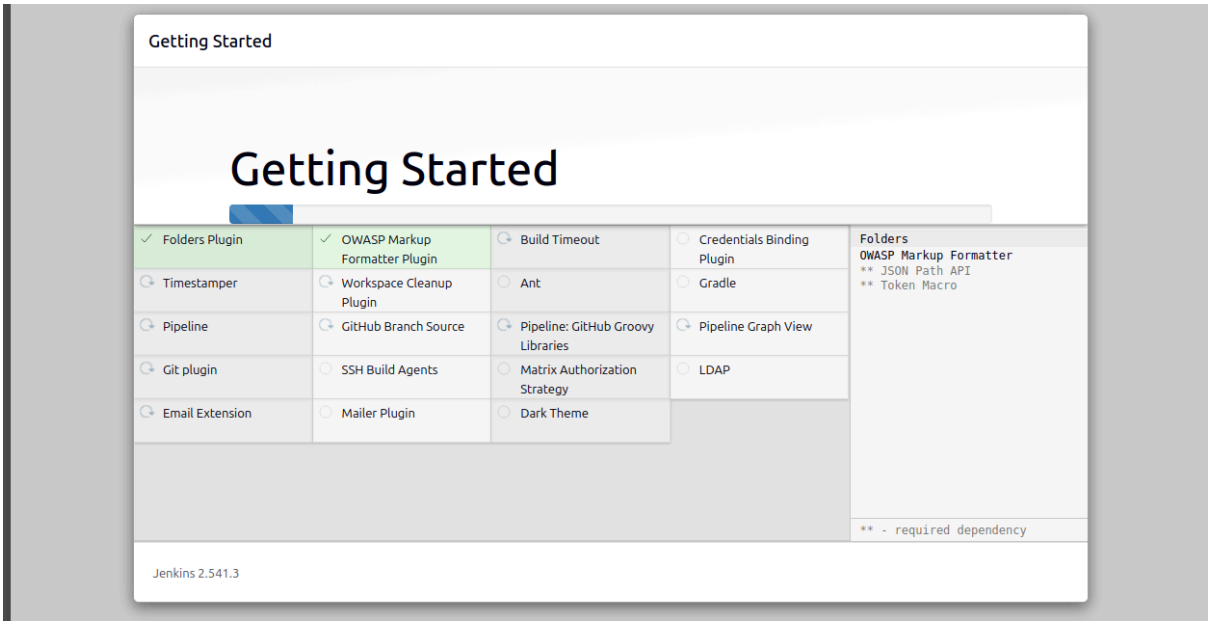

¿Por qué montar /var/run/docker.sock? El socket de Docker es el canal de comunicación con el daemon de Docker del host. Al montarlo en Jenkins, el contenedor puede ejecutar comandos docker build y docker push usando el daemon del host. Esto evita Docker-in-Docker (DinD), que es más complejo y menos estable.

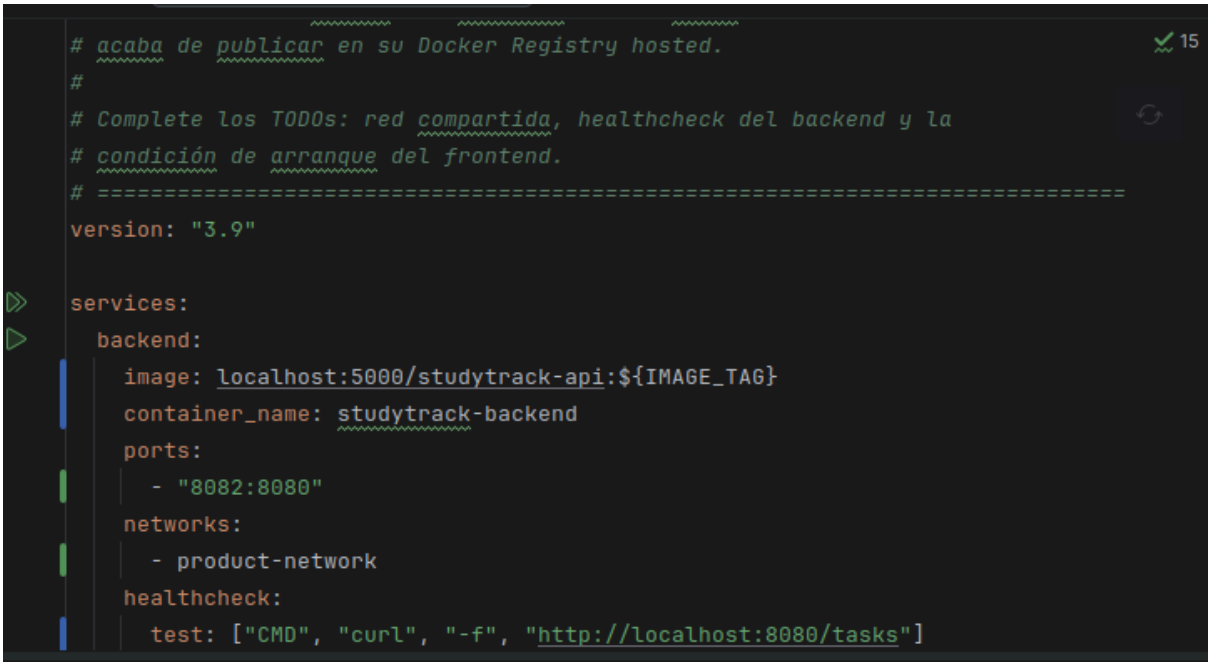

Ahora, levantamos Jenkins:

Obtenemos la contraseña inicial de jenkins y lo configuramos http://localhost:8080 e instalamos los plugins sugeridos:

Jenkinsfile + deploy/docker-compose.yml

```
# acaba de publicar en su Docker Registry hosted.
#
# Complete los TODOs: red compartida, healthcheck del backend y la
# condición de arranque del frontend.
# ============================================================================
version: "3.9"
